

Shepherd Center

Hulse Spinal Cord Injury Lab

Conducting Innovative Research Aimed at Improving Functional Outcomes
and Quality Of Life for People with Spinal Cord Injury

Do you have a spinal cord injury classified as AIS C or D? Has it been at least six months since your spinal cord injury?

We are currently conducting new research studies to understand how different types of vibration and stimulation affect spasticity and walking ability.

We need your help!

We are studying the effects of whole body vibration on spasticity and walking function.

Participation includes:

- Questionnaires
- Standing activities
- Spasticity and walking tests

Time commitment:

- One session each week
- 2 to 3 hours each
- Six weeks total

Compensation:

- \$120 after the last session
